

What is claimed is:

1. A binding for a snowboard comprising:

a base plate;

5 a heal cup;

a coupling tool for coupling the base plate and the heal cup through a member for hardness adjustment;

a boot fixing band with one end attached to the one side of the heal cup; and

10 a belt attached to the other side of the heal cup so as to be coupled with the band,

wherein the member for hardness adjustment is replaceable by another member with different hardness.

15 2. A binding for a snowboard according to claim 1, wherein the member for hardness adjustment is detachably coupled with either one of the base plate and the heal cup, and the coupling tool is a tightening tool of coupling the base plate and the heal cup through the member for  
20 hardness adjustment.

3. A binding for a snowboard according to claim 1, wherein the member for hardness adjustment is inserted in a through-hole formed in one of the base plate and  
25 the heal cup.

4. A binding for a snowboard according to claim 2,  
wherein the member for hardness adjustment is inserted  
in a through-hole formed in one of the base plate and  
5 the heel cup.

5. A binding for a snowboard according to claim 3,  
wherein the through-hole is one of a plurality of  
through-holes.

6. A binding for a snowboard according to claim 4,  
wherein the through-hole is one of a plurality of  
through-holes.

7. A binding for a snowboard according to claim 3,  
wherein that the through-hole is a slender hole.

8. A binding for a snowboard according to claim 4,  
wherein that the through-hole is a slender hole.

9. A binding for a snowboard according to claim 5,  
wherein that the through-hole is a slender hole.

10. A binding for a snowboard according to claim  
12, wherein that the through-hole is a slender hole.

11. A binding for a snowboard according to claim 3, wherein the tightening tool is one of a plurality of tightening tools.

5

12. A binding for a snowboard according to claim 10, wherein the tightening tool is one of a plurality of tightening tools.

10

13. A binding for a snowboard according to claim 1, wherein the coupling tool is a screw which passes through the member for hardness adjustment and threadedly-engaged with the other of the base plate and the heel cup.

15

14. A binding for a snowboard according to claim 12, wherein the coupling tool is a screw which passes through the member for hardness adjustment and threadedly-engaged with the other of the base plate and the heel cup.
